

COIN PACKAGING SYSTEMS

BDO 1 Coin Sachet

The BDO 1 Coin Sachet unit is the basis of many of SCAN COIN's sachet systems, enabling an operator to select any value of coin to be packaged in a security sealed bag of the appropriate size.

Combined with a SC3003 coin counter, filling speeds of over 60 sachets per minute are achieved using a BDO twin head device (denomination dependent).

Features

The standard BDO 1 Coin Sachet machines can be configured in a number of ways.

Single head systems:

- For simple standalone applications, a system comprising a BDO 1C with a single coin counter is set up.
- Set up with either the SC3003 or SC360 coin counter—depending on local requirements and coin processing volumes.
- Specialised mechanics within the unit offer trouble-free control and easy maintenance.
- Modular design for easy component replacement ensures that running costs are kept to a minimum.

Twin head systems:

- For higher throughput applications, a system with the BDO 1 sachet machine with a TFCF unit (escrow) and dual SC3003 is installed, providing optimum sachet production speed.
- Usually used on Mini BPS or Three Channel Bullion Packaging Systems.
