

Pay-In Machine

The Pay-In Machine (PIM) is a self-service deposit solution designed to allow business customers to deposit large volumes of cash and cheques quickly and conveniently. The PIM accepts deposits of sealed tamper-evident, barcoded bags, which allows each transaction to be tracked and a unique acknowledgement to be provided to the customer.

Fully customisable, the PIM is available as a standalone, in branch or external through-the-wall solution, providing banks, CIT providers and transport companies with an automated 24/7 deposit facility for their business customers.

FEATURES

- SVGA 15" LCD and simple user interface for ease of use
- Reliable technology ensures excellent availability and a low total cost of ownership
